The process for changing your cPanel hostname is quite easy and can actually be accomplished within a few minutes or less within Linux. Please follow the aforementioned step-by-step directions outlined below:

- Login to your cPanel/WHM server via SSH
- Next, please run the following command within Linux:

hostname **server.your-domain-here.com** && /usr/local/cpanel/cpkeyctl

- Please adjust the values outlined in BOLD to their actual values

Should you have any further questions pertaining to your [cPanel license](#), please feel free to get in contact with the LicenseCube support team for additional assistance and/or guidance.
