How do I change my cPanel hostname via SSH?

Posted: LicenseCube Support [support@licensecube.com] Online URL: <u>http://kbase.licensecube.com/control-panel-licenses/how-do-i-change-my-cpanel-hostname-via-ssh.html</u>

The process for changing your cPanel hostname is quite easy and can actually be accomplished within a few minutes or less within Linux. Please follow the aforementioned step-by-step directions outlined below:

- Login to your cPanel/WHM server via SSH
- Next, please run the following command within Linux:

hostname server.your-domain-here.com && /usr/local/cpanel/cpkeyclt

• Please adjust the values outlined in BOLD to their actual values

Should you have any further questions pertaining to your <u>cPanel license</u>, please feel free to get in contact with the LicenseCube support team for additional assistance and/or guidance.
