When it comes to adding a SolusVM slave to a SolusVM master, you will need to have two pieces of information. The first piece of information is the SolusVM "Key ID" and the latter is the "SolusVM ID Password". These two pieces of information will allow you to successfully linkup the two servers. Please see below for more details:

- Login to your SolusVM slave node
- Once logged in, please run the following command:

```
# cat /usr/local/solusvm/data/solusvm.conf
```

- The output should take the format of:

```
SALVE-USERNAME:SLAVE-PASSWORD
```

Should you have any further questions pertaining to your [SolusVM license](#), please feel free to get in contact with the LicenseCube support team for further assistance.
