cPanel is one of the most popular control panels in the market currently. However, in many cases cPanel isn't installed correctly, thus leading to potential problems in the future. To install your cPanel dedicated license correctly, please follow the steps outlined below:

- Login to your cPanel dedicated server via SSH
- Once logged in, please enter the following block of code:

```
cd /home/ && mkdir installatron && cd installatron &&
wget http://data1.installatron.com/installatron/installatron_setup.sh &&
chmod +x installatron_setup.sh &&
./installatron_setup.sh &€“f
```

- Upon completion, you will be able to login to WHM (Web Host Manager)

Once you have logged in, you will now be able to fully configure your cPanel/WHM dedicated server to your needs/requirements.

Should you have any further questions pertaining to your [cPanel license](#), please feel free to reach out to the LicenseCube support team for additional assistance.
