How do I install InterWorx?

The process for installing InterWorx isn't a complicated. However, we do request that you still follow our step-by-step directions to ensure that the installation completes successfully:

- Login to your server via SSH as "ROOT"
- Next, run the following Linux command:

cd /root/ &&
 wget http://updates.interworx.com/iworx/scripts/iworx-cp-install.sh &&
 sh iworx-cp-install.sh

- The above will initialize the installation process

Upon the installation process completing, you will be able to login to your InterWorx installation complete the license activation process, and configuration needed.

Should you have any further questions pertaining to your InterWorx license, please feel free to reach out to the LicenseCube support team for additional information and/or guidance.
