The process of setting up another SMTP port on Parallels Plesk isn't as complicated as you might initially think. Please follow the step-by-step directions outlined below.

- Login to your Plesk Virtual/Dedicated server via SSH
- Please run the following command within SSH:

```
# cd /etc/xinetd.d && cp smtp_psa smtp_psa_p26 && vi smtp_psa_p26
```

- Next, please enter the following line within the file your editing:

```
service smtp_p26
```

- Then, please save the changes by typing the following keys:

```
Esc key + :wq
```

- Upon completion, please run the following file:

```
# vi /etc/services
```

- Within the above-mentioned file, please add the rows outlined:

```
smtp_p26 26/tcp mail  
smtp_p26 26/udp mail
```

- Next, just save the changes you've just done!

Should you have any further questions pertaining to your [Plesk license](#), please feel free to get in contact with our webhosting support team for additional assistance.
