How would I install Virtuozzo?

The process for Installing Virtuozzo within your dedicated server isn't complicated. However, to ensure that there are no problems during the installation process, please follow the step-by-step directions outlined below:

- Login to your dedicated server via SSH
- Next, run the following command within Linux

I386 Operating Systems:

mkdir virtuozzo-install && cd virtuozzo-install/ && wget http://download.parallels.com/pvc/47/lin/vzinstall-linux-i386.bin && chmod a+x vzinstall-linux.bin && ./vzinstall-linux.bin

x86_64 Operating Systems:

mkdir virtuozzo-install && cd virtuozzo-install/ && wget download.parallels.com/pvc/47/lin/vzinstall-linux-x86_64.bin && chmod a+x vzinstall-linux.bin && ./vzinstall-linux.bin

- Follow the onscreen instructions outlined

Upon completion, you will be requested to reboot the server, please go ahead and do so. Doing the reboot will apply all the changes needed for your server to start running the Virtuozzo virtualization technology.

Should you have any further questions pertaining to your [Virtuozzo license](#), please feel free to get in contact with the LicenseCube support team for additional assistance.
