The process for activating CloudLinux is quite easy and only takes a couple of steps. Please see the step-by-step directions outlined below for your convenience.

Please note that this tutorial assumes that you are using a CloudLinux license key, rather than CloudLinux via cPanel.

- Login to your CloudLinux server via SSH
- Next, run the following command via SSH:

rhnreg_ks --activationkey=**<newkey>** --force

- Please adjust the items outlined in BOLD above
- Finally, hit "return" to submit the changes!

If you have any further questions pertaining to your CloudLinux license, please feel free to get in contact with the LicenseCube support team for additional assistance.
