How do I change the IP address of my Plesk SiteBuilder?

The process for changing the IP address, that Plesk SiteBuilder is attached to, is quite easy and can generally be completed within a few minutes. Please follow the below step-by-step directions:

- Login to your Virtual/Dedicated server via SSH
- Next, run the following command via Linux

sb_config --sb_host_ip **69.xx.xx.xxx**

- Please change the items outlined in BOLD above
- Then, please run the following command:

sb_config --force_update_wscfg

Upon completion, your Plesk SiteBuilder will be on a new IP address rather than the old IP address. You should now login using the new IP address.

If you have any further questions pertaining to your Plesk SiteBuilder license, please feel free to get in contact with the LicenseCube support team for additional assistance.
