To enable LVE support within LiteSpeed is quite easy, and only takes a few minutes. Please note that LVE support is a requirement for LiteSpeed to function correctly on your CloudLinux enabled hosting account. Please follow the step-by-step directions outlined below.

- Login to your LiteSpeed Web Server as the admin
- Next, go to the top menu and click on "Configurations"
- Then, click on "Server" to load its configuration
- Once its loaded, under the "Server Process" table click "Edit"
- Next, locate/enable the option reading "Enable LVE" and save!

Once this has been completed, your LiteSpeed web server should function correctly once again within the CloudLinux environment.

Should you have any further questions pertaining to your [CloudLinux license](#), please feel free to get in contact with the LicenseCube support team for further help.
