---

The process for installing CloudLinux on your cPanel server is quite easy to follow and generally only takes a couple of minutes. Please use the step-by-step directions outlined below to get CloudLinux installed.

- Login to your cPanel/WHM server using SSH
- Next, run the following command via SSH:

```
wget http://repo.cloudlinux.com/cloudlinux/sources/cln/cpanel2cl &&  
sh cpanel2cl -k <activation_key>&&  
reboot
```

- Adjust the times outlined in BOLD to their correct values
- After your server has rebooted, please run (via SSH):

```
# /scripts/easyapache --build
```

Should you have any further questions pertaining to your [CloudLinux license](#), please feel free to get in contact with the LicenseCube support team for additional assistance.
