How do I install CloudLinux on a DirectAdmin server?

The installation process for CloudLinux on a DirectAdmin server is not only easy, but will only take you a couple of minutes to enable your server to be fully protected. Please follow the step-by-step directions outlined below.

- Login to your DirectAdmin server via SSH
- Next, please run the following commands within Linux:

```
wget http://repo.cloudlinux.com/cloudlinux/sources/cln/centos2cl &&
 sh centos2cl -k <activation_key> &&
 reboot
```

- Please adjust the items outlined above in BOLD to their values
- After the reboot, please run the following command:

```
yum install liblve-devel &&
 cd /usr/local/directadmin/custombuild &&
 ./build update &&
 ./build set cloudlinux yes &&
 ./build apache &&
 ./build suphp
```

Once you complete the aforementioned steps, your DirectAdmin server will be fully protected by the CloudLinux, ensuring your customers can't abuse their resources.

Should you have any further questions pertaining to your CloudLinux license, please feel free to get in contact with the LicenseCube support team for additional assistance.
