While the process for removing your Installatron auto-installer from InterWorx isn't complicated, we do recommend following our step-by-step uninstallation guide, to ensure that you perform this action successfully. Please see below for your convenience:

How to remove Installatron from your InterWorx server:

- Login to your InterWorx Virtual/Dedicated server via SSH
- Next, run the following command within Linux:

```
rm -fr /usr/local/interworx/modules/installatron &&  
rpm -e installatron-plugin-interworx &&  
rm -fr /usr/local/installatron &&  
rm -fr /var/installatron &&  
rm -f /etc/cron.d/installatron &&  
rm -fr /home/*/.installatron
```

- Once completed, you'll no longer have Installatron on your server!

If you have any further questions pertaining to your [Installatron license](#), please get in contact with the LicenseCube support team for additional assistance.
