While the process for updating the RVSiteBuilder via cPanel is easy and only takes a couple of minutes, we always suggest doing updates as they come out. To learn how to update RVSiteBuilder manually via cPanel, please see below:

- Login to your cPanel/WHM Virtual/Dedicated server via SSH
- Next, run the following command within Linux:

perl /usr/local/cpanel/whostmgr/docroot/cgi/rvsitebuilderinstaller/autoinstaller.cgi

- Please allow for a few moments for the process to complete!

Upon completion, you should have the latest version of RVSiteBuilder installed on your cPanel/WHM web hosting server.

Should you have any further questions pertaining to your RVSiteBuilder license, please feel free to get in contact with the LicenseCube support team for further assistance.
