To install Trendy SiteBuilder on your cPanel/WHM server, only takes a couple of minutes and is very straightforward. Please follow the step-by-step directions outlined below to complete this process.

Installing Trendy SiteBuilder via SSH:

- Login to your cPanel/WHM server via SSH
- Next, run the following command via SSH:

```
wget http://trendyflashdownload.com/installer/cp/ipbased/trendysitebuilder.sh &&  
chmod 755 trendysitebuilder.sh &&  
./trendysitebuilder.sh
```

- Please allow a few moments for the installation to complete!

Logging into Trendy SiteBuilder via cPanel:

- Login to your cPanel account via SSH
- Next, locate the "Software/Services" section
- Then, please click on the "Trendy SiteBuilder" icon
- Once loaded, you will now be able to design your new website

Should you have any further questions pertaining to your [Trendy SiteBuilder license](#), please feel free to get in contact with the LicenseCube support team for further assistance.
