---

While typically it's not necessary to re-install RVSiteBuilder on your cPanel server, should the need arise, please follow the step-by-step directions outlined below.

- Login to your cPanel/WHM Virtual/Dedicated server via SSH
- Run the following command within your Linux environment:

```
# perl /usr/local/cpanel/whostmgr/docroot/cgi/rvsitebuilderinstaller/autoinstaller.cgi --force
```

- Please allow a few moments for the entire process to complete.

Should you have any further questions pertaining to your [RVSiteBuilder license](#), please feel free to get in contact with the LicenseCube support team for assistance.
