You are unable to upload larger files within your Plesk SiteBuilder due to a PHP restriction that is placed within a configuration file. To increase the limit on the size of the uploads please follow the step-by-step directions outlined below.

- Login to your Virtual/Dedicated server via SSH
- Next, run the following command within Linux:

```
# vi /etc/php.ini
```

- Upon editing, please locate the following line:

```
upload_max_filesize=3M
```

- Next, make the necessary changes and save them!
- Finally, run the following command to restart apache

```
# /etc/init.d/httpd restart
```

Upon completion, you should now have your new settings applied. You will now be able to upload skins, templates, logos and other multimedia via your Plesk SiteBuilder.

Should you have any further questions pertaining to your [Plesk SiteBuilder license](#), please feel free to get in contact with the LicenseCube support team.
