In some rare cases, you'll find that RVSkin doesn't appear within your WHM. However, should you get stuck with this issue, please follow the below-indicated steps to resolve this issue. Please see below.

- Login to your cPanel/WHM Virtual/Dedicated server via SSH
- Next, run the following command within Linux:

```
# /usr/local/cpanel/bin/build_locale_databases --clean && /usr/local/cpanel/bin/build_locale_databases --force
```

Upon completion, please refresh the WHM page to locate the "RVSkin Manager" option now being displayed within your WHM.

Should you have any further questions pertaining to your [RVSkin license](#), please get in contact with the LicenseCube support team for further assistance.
