How would I list all the installations within Softaculous?

The process for listing all the installations that have been done by Softaculous is quite easy, and gives you a general idea of the most utilized script. To do this, please follow the below-mentioned step-by-step guide.

- Login to your Virtual/Dedicated server as the admin (root)
- Next, navigate to the Softaculous Installation
- Then, click on "Installations" in the top menu
- Finally, sort the installations by using one of the three options:

By User - Displays scripts installed by a specific username
 By Scripts - Displays the scripts installed within the account
 By Outdated Installations - Which scripts have yet to be updated

If you have any further questions pertaining to your Softaculous license, please feel free to get in contact with the LicenseCube support team for extra help.
