

How do I synchronize my Softaculous Plesk install via SSH?

Posted: **LicenseCube Support** [support@licensecube.com]

Online URL:

<http://kbase.licensecube.com/auto-installer-licenses/how-do-i-synchronize-my-softaculous-plesk-install-via-ssh.html>

While the synchronization process is quite simple, the overall step-by-step process will take several minutes to complete (including the actual synchronization process). Please follow the directions outlined below:

- Login to your Plesk virtual/dedicated server via SSH
- Run the following command within Linux:

```
# php /usr/local/softaculous/cron.php
```

- Please wait for the process to complete (may take a few mins)

Once this process has been completed, all the latest updates, fixes and scripts will be added into Softaculous. Your customers can now reset, assured that they have the latest and greatest features.

If you have any further questions pertaining to your [Softaculous license](#), please feel free to get in contact with the LicenseCube support team for additional assistance.
