Synchronizing your Softaculous installation with the Softaculous servers is quite easy, and will only take a few minutes to accomplish via SSH. Please follow the step-by-step directions outlined below:

- Login to your cPanel virtual/dedicated server via SSH
- Run the following command within Linux:

```
# /usr/local/cpanel/3rdparty/bin/php /usr/local/cpanel/whostmgr/docroot/cgi/softaculous/cron.php
```

- Please wait for the process to complete

Once completed, your Softaculous license will be fully synchronized with the Softaculous servers and you will have the latest versions of all the scripts that Softaculous supports.

Should you have any further questions pertaining to your [Softaculous license](#), please feel free to get in contact with the LicenseCube support team for extra help.
