How do I install Softaculous in my cPanel server?

The installation guide for Softaculous is quite easy and literally only takes a few minutes. Nonetheless, please follow our step-by-step directions outlined below to complete the Softaculous installation process.

Installing Softaculous within cPanel:

- Login to your cPanel Virtual/Dedicated server via SSH
- Next, run the following command within Linux:

cd /usr/local/cpanel/whostmgr/docroot/cgi &&
 wget -N http://www.softaculous.com/ins/addon_softaculous.php &&
 chmod 755 addon_softaculous.php &&
 /usr/local/cpanel/3rdparty/bin/php /usr/local/cpanel/whostmgr/docroot/cgi/addon_softaculous.php

- Upon completion, Softaculous should be fully installed!

Checking Softaculous Settings:

- Login to your cPanel Virtual/Dedicated server via SSH
- Upon login, scroll down until you locate the following name:

Softaculous â€" Instant Installs

- Once located, please click on it and click on "Settings"
- Under "Settings" please double check all settings as needed

Should you have any further questions pertaining to your Softaculous license, please feel free to get in contact with the LicenseCube support team for additional assistance.
