Adding a DirectAdmin server into your ClientExec installation only takes a couple of minutes and can be accomplished relatively quickly. Please follow the step-by-step directions outlined below:

- Login to your ClientExec Admin Panel
- Next, go to "System Setup" and then onto "Servers"
- Once under "Servers" click on "Add Server"
- Under the "General" tab fill the following fields:

Server Name
Hostname
Shared IP
Plugin (DirectAdmin)
Domains Quota

- Next, click on the "Name Servers" and click "Add Nameserver"
- A new line will appear, please click on the value to update it
- Next, do the same for "IP Management" as the aforementioned process
- Finally, click on "Plugin Configuration" and input the new server data
- Once ready, simply click "Save" to save the new DirectAdmin server

If you have any further questions pertaining to your ClientExec license, please feel free to get in contact with our web hosting support team for extra help.
