---

When it comes to saving attachments within Ubersmith, you may find that when saving an attachment, you encounter a database error within Ubersmith. This database error is triggered by the MySQL configuration being set too tightly. Please follow the step-by-step directions outlined below to resolve this error:

- Login to your Ubersmith Server via SSH
- Next, run the following command within Linux:

```
# vi /etc/mysql/my.cnf
```

- Please locate/create the following line within this config:

```
max_allowed_packet = 15M
```

- Once completed, please save and exit (esc key + :wq)!
- Finally, run the following Linux command to reboot MySQL:

```
# /etc/init.d/mysql restart
```

Should you have any further questions pertaining to [Ubersmith license](#), please feel free to get in contact with the LicenseCube support team for additional assistance.
